Project Initialization and Planning Phase

Date	01 October 2026
Team ID	SWTID-2026-2430
Project Title	Team Enrollment Confirmation – FitBuddy – AI Fitness Plan Generator using Gemini Models
Maximum Marks	5 Marks
Team Members	Divya.D, Deepika.M, Dharani.T, Divya shree.R, DivyaDharshini.V
Technology Stack	FastAPI, Google Gemini models, HTML/CSS/Jinja2, SQLite/SQLAlchemy, Uvicorn

Project Proposal (Proposed Solution) Report

FitBuddy is a web application designed to help users create a personalized 7-day workout plan using Gemini models. Users enter basic details and fitness goals, receive a structured plan with a concise nutrition or recovery tip, and can submit feedback to request an updated plan. SQLite stores user details and plan history, while an admin view supports oversight.

Project Overview

Objective	Generate clear, personalized 7-day workout plans based on users' goals and inputs, with a simple way to request adjustments.
Scope	Provide a web form, Gemini-powered plan generation, nutrition/recovery tips, feedback-based plan updates, plan storage, and an admin view.

Problem Statement

Description	Users may be unsure which exercises to do, how to organize a weekly routine, or how to adapt a plan when their goals or preferences change. Generic plans may not reflect individual needs.
Impact	Planning can feel confusing or difficult to maintain. A structured plan and feedback flow can help users feel more organized and supported.

Proposed Solution

Approach	Use Gemini models through a FastAPI backend to generate a personalized 7-day plan and revise it based on user feedback.
Key Features	• Personalized 7-day workout plan • Nutrition and recovery tip • Feedback-based plan updates • SQLite storage for user details and original/updated plans • Admin view for oversight

Resource Requirements

Resource Type	Description	Specification / Allocation
Hardware	Computing resources	Laptop/desktop with internet access; standard development system
Hardware	Memory and storage	Sufficient RAM and disk space for code, packages, database, and logs
Software	Backend framework	Python with FastAPI and Uvicorn
Software	AI integration	Google Gemini models and API access
Software	Frontend	HTML, CSS, Jinja2 templates
Software	Database	SQLite with SQLAlchemy
Software	Development tools	Code editor/IDE, browser, API documentation and testing tools
Data	User inputs and plan records	Basic user details, fitness goals, generated plans, feedback, and updated plan history

Team Work Allocation

Responsibilities are assigned in the same order as the team-member list provided.

S. No.	Team Member	Assigned Responsibility	Expected Contribution
1	**Divya.D**	Project coordination and requirements	Define target users, customer problem, fitness-goal inputs, and workflow; coordinate tasks and consolidate documentation.
2	**Deepika.M**	Gemini AI integration and prompt design	Design prompts for structured 7-day workout plans; support nutrition/recovery tips and feedback-based plan updates.
3	**Dharani.T**	FastAPI backend and routing	Handle form processing and routes for plan generation and feedback; connect backend routes to AI functions.
4	**Divya shree.R**	Frontend and user experience	Build HTML/Jinja2 pages for user input, generated results, tips, and feedback; support responsive styling.
5	**DivyaDharshini.V**	Database, testing, and deployment support	Support SQLite/SQLAlchemy storage of users and plan history; test key flows and verify local deployment/API docs.

Shared Team Responsibility

All members will review the final output, check that generated plans are clearly presented, and prepare the project demonstration. Fitness suggestions are general information and should be adapted to individual needs.
