Project Initialization and Planning Phase

Date	01 October 2026
Team ID	SWTID-2026-2430
Project Name	Team Enrollment Confirmation - FitBuddy – AI Fitness Plan Generator using Gemini Models
Maximum Marks	3 Marks

Define Problem Statements (Customer Problem Statement Template):
Create a problem statement to understand the fitness user's point of view. FitBuddy is designed to help users generate personalized workout plans, receive nutrition or recovery tips, and update plans using feedback through Gemini AI.

Team Problem Statements & Work Allocation:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A fitness user seeking a personalized plan.	Get a 7-day workout plan suited to my goal.	Generic plans may not match my needs.	I need AI-based personalization.	Motivated when the plan fits my goal.
PS-2	A user entering my fitness details.	Submit my details and receive the plan smoothly.	Complex processing can make the process difficult.	The backend must handle inputs and routes correctly.	Confident when the system responds clearly.
PS-3	A registered FitBuddy user.	Keep my profile and workout plans available.	I may lose access to earlier plans or updates.	User and plan data must be stored properly.	Secure and organized about my progress.
PS-4	A fitness user using the web interface.	Enter details, view results and submit feedback easily.	A confusing interface can make the app difficult to use.	The pages should be simple and responsive.	Comfortable while using the application.
PS-5	A user relying on the generated plan.	Use FitBuddy reliably on my local/web setup.	Errors during testing or deployment can interrupt use.	The complete system needs testing and verification.	Reassured when the application works correctly.

Assigned Work in Name Order: 1. Divya.D – Gemini model selection and AI integration; 2. Deepika.M – FastAPI backend, user input processing and routes; 3. Dharani.T – SQLite/SQLAlchemy database and plan storage; 4. Divya shree.R – HTML, CSS and Jinja2 frontend; 5. DivyaDharshini.V – local deployment, testing, API verification and integration support.
